

54'

Hanse «

Hanse's 540e, designed by Judel/Vrolijk and built in the former East Germany, is constructed with epoxy resin and Core-cell cores in both the hull and deck. Its 47 feet of waterline length and over 1,600 square feet of sail area to work with make it easy to imagine that this boat will be stiff and swift. Hanse prides itself on offering numerous interior-layout choices; with the 540e, the number of cabins and the style of furniture (mahogany or cherry woodwork) can be accommodated. www.hanseyachts.com
